

The Boeing 747 Story - Tuesday 14th January 2014, 7-8.30 pm

The jetliner which revolutionized the global air travels in the last four decades. The technology needed to build this amazing aircraft was developed over a very short period by engineers who didn't know it couldn't be done. This airplane was supposed to be a stop-gap between the Boeing jet aircraft like the 737 and the Supersonic jets, but it has grown into one of the most used and most loved airframes of all time. The Lecture covers the exciting story of the life of this remarkable aircraft from 1965 till today starting with its design followed by production, operation, maintenance, crashes and last modifications.

Dr Jezdimir Knezevic, the presenter is the “father” of the Mirce Mechanics and the Founder and President of the MIRCE Akademy, at Woodbury Park. His multi disciplinary theoretical knowledge, huge industrial experience and an endless passion for the subject have attracted over 6000 engineers, managers, analysts and students to his courses and educational programmes in over 40 countries in Europe, Asia, Africa, North and South America and Australia, at universities, school, professional institutions, industry and government.
