1: Truth and science 1.0 The whole truth 1.1 Mathematical Truth 1.2 Physical truth 1.3 Religious Truth 1.4 Definition of Science Chapter 2: About the process 2.0 Transport of particles 2.1 Transport of systems 2.1.1 The free flight kernel 2.1.2 The event kernel 2.2. The Prediction line 2.2.1 The case of sensitivity 2.2.2 A non-monotonic system 2.3 data analysis and inspection 2.2.4 Conveyer rollers and independence of components Chapter 3: A few words more about the transport Equation 3.0 Transport and free will 3.1 Availability & Reliability and Estimators 3.1.1 Throughput and the basic Monte Carlo history 3.1.2 Number of failures & cost items 3.2 The explicit Equation 3.2.1 The transport equation in steady state 3.2.2 Reduction to the Markov equation 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
1.1 Mathematical Truth 1.2 Physical truth 1.3 Religious Truth 1.4 Definition of Science Chapter 2: About the process 2.0 Transport of particles 2.1 Transport of systems 2.1.1 The free flight kernel 2.1.2 The event kernel 2.2.1 The exemption line 2.2.1 The case of sensitivity 2.2.2 A non-monotonic system 2.2.3 data analysis and inspection 2.2.4 Conveyer rollers and independence of components Chapter 3: A few words more about the transport Equation 3.0 Transport and free will 3.1 Availability & Reliability and Estimators 3.1.1 Throughput and the basic Monte Carlo history 3.1.2 Number of failures & cost items 3.2 The explicit Equation 3.2.1 The transport equation in steady state 3.2.2 Reduction to the Markov equation 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
1.2 Physical truth 1.3 Religious Truth 1.4 Definition of Science Chapter 2: About the process 2.0 Transport of particles 2.1 Transport of systems 2.1.1 The free flight kernel 2.1.2 The event kernel 2.2.1 The event kernel 2.2.1 The case of sensitivity 2.2.2 A non-monotonic system 2.2.3 data analysis and inspection 2.2.4 Conveyer rollers and independence of components Chapter 3: A few words more about the transport Equation 3.0 Transport and free will 3.1 Availability & Reliability and Estimators 3.1.1 Throughput and the basic Monte Carlo history 3.1.2 Number of failures & cost items 3.2 The explicit Equation 3.2.1 The transport equation in steady state 3.2.2 Reduction to the Markov equation 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
1.3 Religious Truth 1.4 Definition of Science Chapter 2: About the process 2.0 Transport of particles 2.1 Transport of systems 2.1.1 The free flight kernel 2.1.2 The event kernel 2.2.1 The case of sensitivity 2.2.2 A non-monotonic system 2.2.3 data analysis and inspection 2.2.4 Conveyer rollers and independence of components Chapter 3: A few words more about the transport Equation 3.0 Transport and free will 3.1 Availability & Reliability and Estimators 3.1.1 Throughput and the basic Monte Carlo history 3.1.2 Number of failures & cost items 3.2 The explicit Equation 3.2.1 The transport equation in steady state 3.2.2 Reduction to the Markov equation 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
Chapter 2: About the process 2.0 Transport of particles 2.1 Transport of systems 2.1.1 The free flight kernel 2.1.2 The event kernel 2.2.1 The case of sensitivity 2.2.2 A non-monotonic system 2.3 data analysis and inspection 2.2.4 Conveyer rollers and independence of components Chapter 3: A few words more about the transport Equation 3.0 Transport and free will 3.1 Availability & Reliability and Estimators 3.1.1 Throughput and the basic Monte Carlo history 3.1.2 Number of failures & cost items 3.2 The explicit Equation 3.2.1 The transport equation in steady state 3.2.2 Reduction to the Markov equation 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
Chapter 2: About the process 2.0 Transport of particles 2.1 Transport of systems 2.1.1 The free flight kernel 2.1.2 The event kernel 2.2.1 The case of sensitivity 2.2.2 A non-monotonic system 2.2.3 data analysis and inspection 2.2.4 Conveyer rollers and independence of components Chapter 3: A few words more about the transport Equation 3.0 Transport and free will 3.1 Availability & Reliability and Estimators 3.1.1 Throughput and the basic Monte Carlo history 3.1.2 Number of failures & cost items 3.2 The explicit Equation 3.2.1 The transport equation in steady state 3.2.2 Reduction to the Markov equation 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
2.0 Transport of particles 2.1 Transport of systems 2.1.1 The free flight kernel 2.1.2 The event kernel 2.2 The Prediction line 2.2.1 The case of sensitivity 2.2.2 A non-monotonic system 2.2.3 data analysis and inspection 2.2.4 Conveyer rollers and independence of components Chapter 3: A few words more about the transport Equation 3.0 Transport and free will 3.1 Availability & Reliability and Estimators 3.1.1 Throughput and the basic Monte Carlo history 3.1.2 Number of failures & cost items 3.2 The explicit Equation 3.2.1 The transport equation in steady state 3.2.2 Reduction to the Markov equation 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
2.1 Transport of systems 2.1.1 The free flight kernel 2.1.2 The event kernel 2.2 The Prediction line 2.2.1 The case of sensitivity 2.2.2 A non-monotonic system 2.2.3 data analysis and inspection 2.2.4 Conveyer rollers and independence of components Chapter 3: A few words more about the transport Equation 3.0 Transport and free will 3.1 Availability & Reliability and Estimators 3.1.1 Throughput and the basic Monte Carlo history 3.1.2 Number of failures & cost items 3.2 The explicit Equation 3.2.1 The transport equation in steady state 3.2.2 Reduction to the Markov equation 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
2.1.1 The free flight kernel 2.1.2 The event kernel 2.2 The Prediction line 2.2.1 The case of sensitivity 2.2.2 A non-monotonic system 2.2.3 data analysis and inspection 2.2.4 Conveyer rollers and independence of components Chapter 3: A few words more about the transport Equation 3.0 Transport and free will 3.1 Availability & Reliability and Estimators 3.1.1 Throughput and the basic Monte Carlo history 3.1.2 Number of failures & cost items 3.2 The explicit Equation 3.2.1 The transport equation in steady state 3.2.2 Reduction to the Markov equation 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
2.1.2 The event kernel 2.2 The Prediction line 2.2.1 The case of sensitivity 2.2.2 A non-monotonic system 2.2.3 data analysis and inspection 2.2.4 Conveyer rollers and independence of components Chapter 3: A few words more about the transport Equation 3.0 Transport and free will 3.1 Availability & Reliability and Estimators 3.1.1 Throughput and the basic Monte Carlo history 3.1.2 Number of failures & cost items 3.2 The explicit Equation 3.2.1 The transport equation in steady state 3.2.2 Reduction to the Markov equation 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
2.2 The Prediction line 2.2.1 The case of sensitivity 2.2.2 A non-monotonic system 2.2.3 data analysis and inspection 2.2.4 Conveyer rollers and independence of components Chapter 3: A few words more about the transport Equation 3.0 Transport and free will 3.1 Availability & Reliability and Estimators 3.1.1 Throughput and the basic Monte Carlo history 3.1.2 Number of failures & cost items 3.2 The explicit Equation 3.2.1 The transport equation in steady state 3.2.2 Reduction to the Markov equation 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
2.2.1 The case of sensitivity 2.2.2 A non-monotonic system 2.2.3 data analysis and inspection 2.2.4 Conveyer rollers and independence of components Chapter 3: A few words more about the transport Equation 3.0 Transport and free will 3.1 Availability & Reliability and Estimators 3.1.1 Throughput and the basic Monte Carlo history 3.1.2 Number of failures & cost items 3.2 The explicit Equation 3.2.1 The transport equation in steady state 3.2.2 Reduction to the Markov equation 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
2.2.2 A non-monotonic system 2.2.3 data analysis and inspection 2.2.4 Conveyer rollers and independence of components Chapter 3: A few words more about the transport Equation 3.0 Transport and free will 3.1 Availability & Reliability and Estimators 3.1.1 Throughput and the basic Monte Carlo history 3.1.2 Number of failures & cost items 3.2 The explicit Equation 3.2.1 The transport equation in steady state 3.2.2 Reduction to the Markov equation 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
2.2.3 data analysis and inspection 2.2.4 Conveyer rollers and independence of components Chapter 3: A few words more about the transport Equation 3.0 Transport and free will 3.1 Availability & Reliability and Estimators 3.1.1 Throughput and the basic Monte Carlo history 3.1.2 Number of failures & cost items 3.2 The explicit Equation 3.2.1 The transport equation in steady state 3.2.2 Reduction to the Markov equation 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
2.2.4 Conveyer rollers and independence of components Chapter 3: A few words more about the transport Equation 3.0 Transport and free will 3.1 Availability & Reliability and Estimators 3.1.1 Throughput and the basic Monte Carlo history 3.1.2 Number of failures & cost items 3.2 The explicit Equation 3.2.1 The transport equation in steady state 3.2.2 Reduction to the Markov equation 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
Chapter 3: A few words more about the transport Equation 3.0 Transport and free will 3.1 Availability & Reliability and Estimators 3.1.1 Throughput and the basic Monte Carlo history 3.1.2 Number of failures & cost items 3.2 The explicit Equation 3.2.1 The transport equation in steady state 3.2.2 Reduction to the Markov equation 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
3.0 Transport and free will 3.1 Availability & Reliability and Estimators 3.1.1 Throughput and the basic Monte Carlo history 3.1.2 Number of failures & cost items 3.2 The explicit Equation 3.2.1 The transport equation in steady state 3.2.2 Reduction to the Markov equation 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
3.1 Availability & Reliability and Estimators 3.1.1 Throughput and the basic Monte Carlo history 3.1.2 Number of failures & cost items 3.2 The explicit Equation 3.2.1 The transport equation in steady state 3.2.2 Reduction to the Markov equation 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
3.1.1 Throughput and the basic Monte Carlo history 3.1.2 Number of failures & cost items 3.2 The explicit Equation 3.2.1 The transport equation in steady state 3.2.2 Reduction to the Markov equation 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
3.1.2 Number of failures & cost items 3.2 The explicit Equation 3.2.1 The transport equation in steady state 3.2.2 Reduction to the Markov equation 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
 3.2 The explicit Equation 3.2.1 The transport equation in steady state 3.2.2 Reduction to the Markov equation 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
 3.2.1 The transport equation in steady state 3.2.2 Reduction to the Markov equation 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
 3.2.2 Reduction to the Markov equation 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
 3.2.3 A power production system, Markov and MC transport solutions 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
 3.2.4 The production Histogram and warranty 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
 3.2.5 A Monte Carlo transport Solution 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
 3.3 Partial repair and aging in the explicit transport Equation: 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
 3.3.1 Analytic and Markov approach to the protected pump model 3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
3.3.2 The Monte Carlo transport solution 3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
3.4 A buffer tank in chemical production 3.4.1 A simplistic analytic model 3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
3.4.1 A simplistic analytic model3.4.2 States and the transport equations of the basic flow model3.4.3 Modeling the flow process
3.4.2 States and the transport equations of the basic flow model 3.4.3 Modeling the flow process
