Ayrton Senna (1960-1994), a F1 racing driver from Brazil, has been known to millions and millions of people in the World. However, the MIRCE Akademy has decided to recognise Ayrton Senna as a scientist, which has been known to us for many years. Of course, these two, Senna the F1 driver and Senna the scientist, are closely related, but unlike the “chicken and egg” situation, we are absolutely sure that “our Senna” has created Senna the Formula 1 World Champion (1988, 1990 and 1991)

The MIRCE Akademy has made this decision as a sign of the huge respect for his unique talent, intellect, determination, stamina and ability to maximise functionality performance of the system, “Formula 1 World Championship”, that awarded him 41 victories, 65 pole positions, by systematically dealing with the complex relationships between a large number of physical and cognitive phenomena, which are time, space and human dependent.

Information from existing literature and other media, which we have studied during last decades, have made a considerable impact on the development of Mirce Mechanics at the MIRCE Akademy and clearly revealed **scientific mind inside the world famous yellow helmet**. Hence, we wish to recognise the fact that Ayrton Senna became a Mirce Mechanic, several years before it has been formulated as a new scientific discipline.

Bianca Senna received the Fellowship on the behalf of the Ayrton Senna Institute from Dr Knezevic, the President of the MIRCE Akademy, at the Royal Society, London, 27th May, 2014.
